

Trading Education Platform

A secure digital learning experience connecting live trading classes, structured study materials, recordings, and measurable student progress.

The concept, in one view

The proposed platform gives the institution one controlled place to manage its academic operations and gives every student a simple, structured learning journey.

Central rule: materials and recordings can be prepared before a class, but students receive access only after the live class is completed and an authorized staff member releases the content.

Expected value

Right access for every role

Permissions will be role-based and enforced by the server. Staff members only see and perform functions appropriate to their responsibilities.

Super Admin	Full control of the platform, security, settings, and access.	Content Manager	Uploads, descriptions, ordering, and resource preparation.
Administrator	Students, batches, enrolments, operational reports, and accounts.	Website Editor	Public pages, trainers, testimonials, FAQs, and notices.
Academic Manager	Syllabus planning, class completion, approvals, and releases.	Student	Only own enrolments, available classes, content, and progress.
Instructor	Assigned classes, materials, recordings, and learner visibility.		

Permission examples

Manage users

Assign roles

Create batches

Enrol students

Plan classes

Upload materials

Approve content

Complete class

Release materials

View reports

Edit website

Review audit log

Governance recommendation: for stronger control, uploading content and releasing it can be assigned to different roles. This creates a simple review-and-approval process.

Protection principles

Least access

Give each user only the permissions needed for their work.

Server validation

Hidden buttons are not security; every request is authorized centrally.

Audit history

Record who completed, released, re-locked, or changed important content.

A simple learning structure

Content is organized from the overall course down to each live class, so students always know what comes next and staff can control individual releases.

Class lifecycle

Status	Meaning	Student access
Draft	Being prepared internally	Not visible
Scheduled	Date, instructor, and live-class details confirmed	Schedule visible; resources locked
Conducted	Live class has taken place	Resources remain locked
Completed	Academic completion confirmed	Ready for release approval
Released	Approved resources published	Available to active enrolments

Content unlocks only after class

The system supports preparation in advance without exposing future learning materials. Release is explicit, controlled, and recorded.

Rules enforced by the platform

- ✓ Uploading never means publishing.
- ✓ Draft classes cannot release resources.
- ✓ Only authorized roles can confirm completion.
- ✓ Only approved resources are released.
- ✓ Students need an active batch enrolment.
- ✓ Direct links cannot bypass permissions.
- ✓ Staff may preview locked resources.
- ✓ Emergency re-lock is available and audited.

Illustrative example: “Technical Analysis — Class 06” is visible on the student's timetable. Its PDF and recording remain locked until the Saturday class is completed and the academic manager presses Release.

One operational command centre

The backend brings people, schedules, content, and progress together in a manageable day-to-day workspace.

U

Users & Roles
Staff accounts, student accounts, permissions, invitations, and status.

B

Courses & Batches
Programs, schedules, instructors, capacity, start dates, and batch state.

E

Enrolments
Registration, batch assignment, access dates, status, and bulk imports.

S

Syllabus Planner
Templates, modules, learning outcomes, classes, sequencing, and rescheduling.

M

Materials
Documents, links, videos, ordering, approval, locking, and publishing.

R

Reports
Progress, engagement, conducted classes, pending releases, and exports.

Dashboard attention list

Today	Needs attention	Recent activity
Classes scheduled today	Classes awaiting completion	New student enrolments
Upcoming live sessions	Materials awaiting approval	Recently uploaded recordings
Active batches and capacity	Students with low engagement	Content releases and notices

Suggested operational indicators

Students

active and enrolled

Classes

planned vs. conducted

Releases

pending and completed

Progress

engagement by batch

A clear path through every course

Students receive a focused portal that shows what is next, what is complete, and which resources are now available.

Dashboard

- Current course and batch
- Next live class
- Newly released content
- Announcements
- Overall progress

Learning screen

- Modules in syllabus order
- Upcoming and completed classes
- Clearly locked and available resources
- Notes, links, and protected recordings

EXAMPLE STUDENT JOURNEY

Module 1 · Market Foundations

3 of 3 classes complete

Module 2 · Technical Analysis

Class 04 ✓ Class 05 ✓ Class 06 upcoming

Class 06 · Support & Resistance

Scheduled Saturday · Materials locked until completion

Progress signals

1

Resource activity

Track when an available document or link is opened and completed.

▶

Video progress

Save last position and completion percentage for convenient resuming.

%

Course progress

Roll activity up to class, module, and overall course percentages.

Important: progress belongs to the individual student. A student cannot view or change another learner's activity, and progress does not unlock future class content.

The institution website

The public website explains the institution's value, presents programs clearly, builds confidence, captures enquiries, and directs existing learners to the portal.

Editable without a developer

Authorized website editors should be able to update banners, page sections, course descriptions, trainer profiles, testimonials, FAQs, contact details, upcoming batches, and announcements.

Recommended first release

The MVP focuses on the complete academic journey—from staff setup and batch creation through secure post-class material access.

- ✓ Authentication and password reset
- ✓ Staff roles and granular permissions
- ✓ Student profiles and account status
- ✓ Course and batch management
- ✓ Registration and batch enrolment
- ✓ Syllabus templates and modules
- ✓ Batch-specific class schedules
- ✓ Documents, links, and video records
- ✓ Manual post-class material release
- ✓ Student dashboard and learning view
- ✓ Video resume and basic progress
- ✓ Announcements and notifications
- ✓ Public institution website
- ✓ Basic content-management screens
- ✓ Reports, exports, and audit trail
- ✓ Responsive mobile and desktop design

Recommended after the core is stable

- Online payments and invoices
- Attendance management
- Assignments and grading
- Quizzes and assessments
- Certificates

- Live-class provider integration
- WhatsApp and SMS alerts
- Discussion forums
- Native mobile apps
- Advanced analytics and CRM integration

Scope principle: launch the reliable learning-and-release workflow first. Add commercial, communication, and assessment modules in measured phases.

Build in controlled phases

Each phase produces a reviewable part of the solution and reduces risk before the next layer is added.

Quality gates before launch

Estimation note: calendar and cost estimates should be prepared after the discovery decisions are confirmed, especially video hosting, approval rules, payments, and expected student volume.

A practical, maintainable foundation

For the current MAMP environment, a Laravel and MySQL application is a natural fit. A unified web application keeps the initial build and deployment straightforward.

Recommended application

- Laravel backend
- MySQL database
- Blade and Livewire interface
- Responsive component system
- Queued email notifications
- CSV/Excel reporting exports

Protected content

- Private object or video storage
- Short-lived signed access URLs
- File type and size validation
- Active-enrolment validation
- Streaming preferred for large videos
- Defined backup and retention policy

Security baseline

Identity

Secure passwords, reset flow, session protection, login throttling, and optional admin 2FA.

Authorization

Server-side roles, ownership checks, active enrolment checks, and protected downloads.

Operations

Error monitoring, audit logs, backups, restoration tests, and production health checks.

Core information groups

Identity	Academics	Learning	Communication
Users	Courses	Materials	Announcements
Roles	Batches	Video assets	Notifications
Permissions	Enrolments	Resource progress	Website pages
Profiles	Syllabuses	Video progress	Enquiries
	Classes		Audit logs

Video recommendation: avoid placing large recordings directly on the normal application server. A protected streaming or object-storage service will scale better and provide stronger access control.

Decisions needed before estimation

These items affect workflows, screens, integrations, security, and cost. Confirming them during discovery will make the development estimate dependable.

01 Registration

Will students self-register, or will staff create all accounts?

02 Payments

Does payment status control enrolment and access in the MVP?

03 Release approval

Can instructors release content, or only academic managers?

04 Timing

Is release manual, scheduled, delayed, or a combination?

05 Downloads

Which documents or videos may students download?

06 Video hosting

Which provider will store and stream recordings?

07 Notifications

Email only, or are SMS and WhatsApp needed immediately?

08 Progress

What exactly counts as completion for a class or module?

09 Additional learning

Are attendance, assignments, quizzes, or certificates MVP items?

10 Scale & branding

Expected users, languages, visual identity, hosting, and backup needs?

Immediate next steps

1. Review and approve the proposed scope.
2. Resolve the ten decisions above.
3. Prepare the final permission matrix and user journeys.
4. Create interface wireframes for client approval.
5. Finalize architecture, milestones, estimate, and delivery schedule.

PROPOSED OUTCOME

A controlled learning journey— before, during, and after every class.

The platform gives the institution operational control while giving students a modern, simple, and trustworthy place to continue learning after each live session.
